

# I'm 38

Built in 1976

**38 Year Old Concrete Pavement**  
Interstate 77  
Fairfield County, SC  
(photo taken near exit 34)

## Who says you have to break the bank to become a 38 year old pavement?

Concrete pavements are durable, sustainable and don't break the bank in maintenance and repair costs. An asphalt surface is affected by the sun's rays, gasoline, traffic and weather causing it to require regular maintenance and frequent resurfacing. A typical concrete pavement lasts 40 years or more with very little maintenance required.

Just take this section of concrete pavement on I-77 near Winnsboro in Fairfield County, South Carolina. It is 38 years old and has had little to no maintenance. So choose concrete pavements and you will be choosing a pavement that has competitive up-front pricing and the lowest life cycle cost. Your piggy bank will be glad you did.

For more information on the many benefits of Concrete Pavements, please call:
